                       AЗ
    Modified insulinotropic peptides are disclosed. The modified
AB
     insulinotropic peptides are capable of forming a peptidase stabilized
     insulinotropic peptide. The modified insulinotropic peptides are capable
     of forming covalent bonds with one or more blood components to form a
     conjugate. The conjugates may be formed in vivo or ex vivo. The modified
     peptides are administered to treat humans with diabetes and other related
     diseases.

                       А3
     A method for protecting a peptide from peptidase activity in vivo, the
AB
     peptide being composed of between 2 and 50 amino acids and having a
     C-terminus and an N-terminus and a C-terminus amino acid and an N-terminus
     amino acid is described. In the first step of the method, the peptide is
     modified by attaching a reactive group to the C-terminus amino acid, to
     the N-terminus amino acid, or to an amino acid located between the
     N-terminus and the C-terminus, such that the modified peptide is capable
     of forming a covalent bond in vivo with a reactive functionality on a
     blood component. The solid phase peptide synthesis of a number of derivs.
     with 3-maleimidopropionic acid (3-MPA) is described. In the next step, a
     covalent bond is formed between the reactive group and a reactive
     functionality on a blood component to form a peptide-blood component
     conjugate, thereby protecting said peptide from peptidase activity.
     final step of the method involves the analyzing of the stability of the
     peptide-blood component conjugate to assess the protection of the peptide
     from peptidase activity. Thus, the percentage of a K5 kringle peptide
     (Pro-Arg-Lys-Leu-Tyr-Asp-Lys-NH2) conjugated to human serum albumin via
     MPA remained relatively constant through a 24-h plasma assay in contrast to
     unmodified K5 which decreased to 9% of the original amount of K5 in only 4 h
     in plasma.

                       W
    Methods are provided for use of an exendin, an exendin agonist, or a
     modified exendin or exendin agonist having an exendin or exendin agonist
     linked to one or more polyethylene glycol polymers, for example, for
     lowering glucagon levels and/or suppressing glucagon secretion in a
     subject. These methods are useful in treating hyperglucagonemia and other
     conditions that would be benefited by lowering plasma glucagon or
     suppressing glucagon secretion.
     exendin glucagon suppression; hyperglucagonemia glucagon suppression
     exendin
     Kidney
        (clearance by; exendin or related substance for glucagon suppression)
     Polyoxyalkylenes, biological studies

- AB Novel exendin and exendin agonist compound formulations and dosages and methods of administration thereof are provided. These compns. and methods are useful in treating diabetes and conditions that would be benefited by lowering plasma glucose or delaying and/or slowing gastric emptying or inhibiting food intake.
- ST exendin agonist antidiabetic sequence appetite suppressant

IT Glucagon-like peptide-1 receptors

RL: BPR (Biological process); BSU (Biological study, unclassified); BIOL (Biological study); PROC (Process)

(GLP-1; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Buffers

(acetate; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Drug delivery systems

(buccal; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Phosphates, uses

RL: NUU (Other use, unclassified); USES (Uses)
(buffers; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Stomach

(emptying of; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Drug delivery systems

(freeze-dried; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Drug delivery systems

(injections, s.c.; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Drug delivery systems

(injections; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Drug delivery systems

(intratracheal; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Polyoxyalkylenes, uses

RL: NUU (Other use, unclassified); USES (Uses)
(iso-osmolality modifier; novel exendin agonist formulations and
methods of administration thereof as antidiabetic agents and appetite
suppressants)

IT Solutions

(isotonic solns.; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Drug delivery systems

(liqs.; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite suppressants)

IT Osmolality

(modifiers; novel exendin agonist formulations and methods of administration thereof as antidiabetic agents and appetite

```
suppressants)

AΒ
     Exendin 4 is a biol. active peptide first isolated from Gila monster
```

The invention encompasses polynucleotides encoding proexendin peptides, including exendin and novel peptides, as well as isolated or recombinant proexendin peptides. The invention also includes antibodies which specifically recognize such peptides. Heloderma proexendin sequence immunity insulinotropic diabetes STImmunity IT (administration of peptides for immunity; gene encoding proexendin from Heloderma horridum and applications) Heloderma horridum ΙT Protein sequences (gene encoding proexendin from Heloderma horridum and applications) TΤ Antibodies RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); ANST (Analytical study); BIOL (Biological study) (gene encoding proexendin from Heloderma horridum and applications) IT Diabetes mellitus (non-insulin-dependent, insulinotropic GLP-1 like properties of exendin with applications for treatment of diabetes; gene encoding proexendin from Heloderma horridum and applications) IT 141732-76-5, Exendin 4 RL: BSU (Biological study, unclassified); PRP (Properties); BIOL (Biological study) (alternative form of;; gene encoding proexendin from Heloderma horridum and applications) 211430-73-8, Exendin ENTP (Heloderma horridum) ΙT RL: BSU (Biological study, unclassified); PRP (Properties); BIOL (Biological study) (amino acid sequence of mature; gene encoding proexendin from Heloderma horridum and applications) 188265-76-1, Exendin 4, pro- (Heloderma suspectum) ΙT 203743-40-2 211319-02-7 211319-03-8 **211430-62-5** 211319-01-6 211430-68-1, 1-47-Exendin ENTP (Heloderma horridum) RL: BSU (Biological study, unclassified); PRP (Properties); BIOL (Biological study) (amino acid sequence; gene encoding proexendin from Heloderma horridum and applications) 89750-14-1, Glucagon-like peptide I IT RL: BSU (Biological study, unclassified); BIOL (Biological study) (insulinotropic GLP-1 like properties of exendin with applications for treatment of diabetes; gene encoding proexendin from Heloderma horridum and applications) ΙT 211621-97-5 RL: BSU (Biological study, unclassified); PRP (Properties); BIOL (Biological study) (nucleotide sequence; gene encoding proexendin from Heloderma horridum and applications) THERE ARE 4 CITED REFERENCES AVAILABLE FOR THIS RECORD RE.CNT (1) Chen, Y; THE JOURNAL OF BIOLOGICAL CHEMISTRY 1997, V272(7), P4108 HCAPLUS (2) Eng, J; US 5424286 A 1995 HCAPLUS (3) Eng, J; JOURNAL OF BIOLOGICAL CHEMISTRY 1992, V267(11), P7402 HCAPLUS (4) Pohl, M; GASTROENTEROLOGY, SUPPLEMENT 1997, V112(4), PA1181 L30 ANSWER 9 OF 11 HCAPLUS COPYRIGHT 2003 ACS on STN 1998:490528 HCAPLUS AN DN 129:149256 Entered STN: 06 Aug 1998 ED Preparation of exendin peptides for the reduction of food intake TΙ Beeley, Nigel Robert Arnold; Prickett, Kathryn S.; Bhavsar, Sunil INAmylin Pharmaceuticals, Inc., USA PΑ PCT Int.      Methods for treating conditions or disorders which can be alleviated by
AΒ
     reducing food intake are disclosed which comprise administration of an
     effective amount of an exendin or an exendin agonist, alone or in
     conjunction with other compds. or compns. that effect satiety. Approx.
     180 exendin-related peptides were synthesized by the solid-phase method.
ST
     exendin peptide prepn redn food intake
ΙT
     Appetite
        (disorder; preparation of exendin peptides for the reduction of food intake)
IT
     Appetite depressants
     Feeding
        (preparation of exendin peptides for the reduction of food intake)
ΙT
     Peptides, preparation

OS MARPAT 128:192936 Methods for reducing gastric motility and delaying gastric emptying for AB therapeutic and diagnostic purposes are disclosed which comprise administration of an effective amount of an exendin or an exendin agonist H-Xaal-Xaa2-Xaa3-Gly-Thr-Xaa4-Xaa5-Xaa6-Xaa7-Xaa8-Ser-Lys-Gln-Xaa9-Glu-Glu-Glu-Ala-Val-Arg-Leu-Xaa10-Xaa11-Xaa12-Xaa13-Leu-Lys-Asn-Gly-Gly-Xaa14-Ser-Ser-Gly-Ala-Xaa15-Xaa16-Xaa17-Xaa18-Z [Xaal = His, Arg, Tyr; Xaa2 = Ser, Gly, Ala, Thr; Xaa3, Xaa7, Xaa12 = independently Asp, Glu; Xaa4, Xaa10 = independently Phe, Tyr, naphthylalanine; Xaa5, Xaa6 = independently Thr, Ser; Xaa8, Xaa9 = independently Leu, Ile, Val, pentylglycine, Met; Xaall = any group Xaa8, tert-butylglycine; Xaa13 = any group Xaa4, Trp; Xaa14-Xaa17 = independently Pro, homoproline, 3-Hyp, 4-Hyp, thioproline, N-alkylglycine, N-alkylpentylglycine, N-alkylalanine; Xaa18 = Ser, Thr, Tyr; Z = OH, NH2; with the proviso that the compound does not have the formula of exendin-3 or exendin-4] or a pharmaceutically acceptable salt thereof. Methods for treating conditions associated with elevated, inappropriate, or undesired post-prandial blood glucose levels are disclosed which comprise administration of an effective amount of an exendin or an exendin agonist alone or in conjunction with other anti-gastric emptying agents. Thus, exendin-4 acid and [Leul4, Phe25]-exendin-4, prepared by standard solid-phase methods on a 4-(2,4-dimethoxyphenyl)-Fmocaminomethylphenoxyacetamide norleucine-MBHA resin using 9-fluorenylmethoxycarbonyl (Fmoc)-protected amino acids, inhibited gastric emptying in male HSD rats with EC50 = 0.12 and 0.29 μg . Exendin-4 showed EC50 = 0.27 μg under the same conditions. exendin analog prepn gastrointestinal motility antagonist; gastric STemptying antagonist exendin analog prepn; antidiabetic agent exendin analog prepn Antidiabetic agents ΙT Gastric emptying Gastrointestinal motility (preparation of exendin peptide analogs as agonists for regulating gastrointestinal motility) 107444-51-9P, Glucagon-like peptide-I(7-36) amide 130357-25-4P, TT Exendin-3 (Heloderma horridum) 133514-43-9P, Exendin[9-39] 141758-74-9P, Exendin-4 (Heloderma suspectum) 158345-16-5P 203743-26-4P 203743-27-5P 203743-28-6P 203743-30-0P 203743-31-1P 203743-29-7P 203743-32-2P 203743-33-3P 203743-35-5P 203743-36-6P 203743-37-7P 203743-38-8P 203743-40-2P **203743-41-3P** 203743-42-4P 203743-39-9P 203743-43-5P 203743-44-6P 203743-45-7P 203743-46-8P 203743-47-9P 203743-49-1P 203743-48-0P 203743-50-4P 203743-51-5P 203743-52-6P 203743-53-7P 203743-54-8P 203743-55-9P RL: BAC (Biological activity or effector, except adverse); BSU (Biological study, unclassified); SPN (Synthetic preparation); THU (Therapeutic use); BIOL (Biological study); PREP (Preparation); USES (Uses) (preparation of exendin peptide analogs as agonists for regulating gastrointestinal motility) THERE ARE 12 CITED REFERENCES AVAILABLE FOR THIS RECORD RE.CNT (1) Amylin Pharmaceuticals Inc; WO 9507098 1995 (2) Bayer; Clinical Chemistry 1996, V42(8B), P1361 (3) Chernish; US 3862301 A 1973 HCAPLUS (4) Daniel; Br Med J 1974, V3, P720 MEDLINE (5) Dupre; Diabetes 1995, V44(6), P626 HCAPLUS (6) D'Alessio; J Clin Invest 1994, V93(5), P2263 HCAPLUS (7) Hellstrom; Scand J Gastroenterol 1993, V28(Suppl 197), P38 (8) Miholic; Chirurgisches Forum 1991, P429 HCAPLUS (9) Nauck; Diabetologia, Abstract No 148 1995, V38(Suppl 1), PA39 (10) Rai; Am Physiol J 1993, V265, PG118 MEDLINE

- We synthesized and iodinated an exendin-4 analog, [Y39]exendin-4 (700 AΒ Ci/mmol), for use as a radioligand to characterize exendin receptors on dispersed pancreatic acini and gastric chief cells from guinea pig. Binding of this bioactive radioligand was rapid, temperature-dependent and specific (not inhibited by other pancreatic or gastric secretagogues). Measurement of the ability of exendin-4 to inhibit the binding of 125I-[Y39]exendin-4 indicated the presence of two classes of receptors. Pancreatic acini had 12.5 + 1010 binding sites/mg acinar protein of which 6% were high affinity (Kd = 0.5 nM) and 94% were low affinity (Kd = 0.1 μ M). Chief cells had 3370 binding sites/cell of which 9% were high affinity (Kd = 0.3 nM) and 91% were low affinity (Kd = 0.2 μ M). Washing with 0.2 M acetic acid (pH 2.5), 0.2 M glycine (pH 10.5), or trypsin (100 μ g/mL) after 30 min incubation at 37°, indicated that 63 and 49% of radioligand was internalized in acini and chief cells, resp. Truncated glucagon-like peptide-1 (tGLP-1), a mammalian peptide sharing 53% homol. with exendin-4, inhibited radioligand binding at the same concns. that altered secretion from acini and chief cells. Glucagon, GLP-1 and GLP-2 inhibited 125I-[Y39]exendin-4 binding only at concns. ≥100 nM. Exendin(9-39)NH2, a specific exendin-receptor antagonist, potently inhibited 125I-[Y39] exendin-4 binding (IC50 = 6.1 and 3.5 nM in acini and chief cells, resp.). In pancreatic acini and gastric chief cells from guinea pig, exendin-3, exendin-4 and tGLP-1 increase cellular cAMP and modulate enzyme secretion by interacting with high-affinity exendin receptors. 125I-[Y39] exendin-4 is a useful radioligand for studying exendin receptors.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
       Methods for treating conditions or disorders which can be alleviated by
       reducing food intake are disclosed which comprise administration of an
       effective amount of an exendin or an exendin agonist, alone or in
       conjunction with other compounds or compositions that affect satiety.
       The methods are useful for treating conditions or disorders, including
       obesity, Type II diabetes, eating disorders, and insulin-resistance
       syndrome. The methods are also useful for lowering the plasma glucose
       level, lowering the plasma lipid level, reducing the cardiac risk,
       reducing the appetite, and reducing the weight of subjects.
       Pharmaceutical compositions for use in the methods of the invention are
       also disclosed.
CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Modified insulinotropic peptides are disclosed. The modified insulinotropic peptides are capable of forming a peptidase stabilized insulinotropic peptide. The modified insulinotropic peptides are capable of forming covalent bonds with one or more blood components to form a conjugate. The conjugates may be formed in vivo or ex vivo. The modified peptides are administered to treat humans with diabetes and other related diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAY17535 to AAY17624 represent exendin peptide agonists. Exendins are peptides that are found in the venom of the Gila-monster, a lizard peptides to Arizona and Northern Mexico. The peptide agonists are endogenous to Arizona and Northern Mexico. The peptide agonists are used to treat diabetes mellitus (types I or II), hyperglycaemia or hypoglycaemia. They can also be used for in vitro and in vivo studies on exendins and their agonists. They regulate gastric motility and slow gastric emptying (resulting in lower post-prandial glucose levels).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide agonists of exendin - delay stomach emptying, for treating diabetes and hypo- or hyper-glycaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 28; Fig 4; 144pp; English.

Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.

The invention relates to the use of an exendin (AAB64181-B64182) or CC an exendin agonist (AAB64185-B64368) for treating gestational diabetes cc mellitus (GDM) in a patient GDM arises during pregnancy, and is due controlled to the combination of increased insulin resistance and a diminished cc to a combination of increased insulin resistance and an exerction increase. GDM cc pregnancy, both insulin resistance and insulin secretion increase. GDM cc pregnancies are associated with complications in both the mother and the cc pregnancies are associated with complications in both the mother and the cc pregnancies are associated with complications in both the mother and the cc infections. GDM results in an elevated rate of Caesarian delivery. CC hypertensive disorders such as pre-eclampsia, and urinary tract cc infections. GDM results in an elevated rate of foetal abnormalities such cc neonatal morbidites such as hypoglycaenia, hypocalcaemia, of complete controlled for the secretions of the Gila monster (exendin-4) and the Mexican beaded lizard cc secretions of the Gila monster (exendin-4) and the Mexican beaded lizard (cc sundin-1) which exhibit homology with several members of the cc secretions of the Sila monster (exendin-4) and the Mexican beaded lizard cc secretions of the Sila monster (exendin-1) and have similar cc diabetes, which are contraindicated for GDM, exendins and exendin Example 178; Page 119; 133pp; English.

The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an triglyceride and other lipid levels by administering exendin or an triglyceride and other lipid levels by administering exending have inotropic and diuretic effects. They

They have a potent and prolonged effect on blood glucose, and, unlike conventional insulin therapy, should not cause weight gain, as they inhibit gastric emptying and reduce appetite. The present sequence represents a exendin agonist of the invention which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   based upon the sequence of exendin-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        exendin agonist peptide SEQ ID NO 39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               plasma glucose; gastric emptying; food intake.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB11313 standard; Peptide;
                                                                                                                                            This invention describes a novel formulation (I) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pH of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the sensitivity of a subject to insulin to treat diabetes and disorders which benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO200041546-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modified-site
                                                                                                                                                                                                  The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride a significant effect on the reduction of blood serum triglyceride.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09-JAN-2001; 2001WO-US00719
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified-site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19-JUL-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200151078-A1
                                                                                                                               concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin. Note: The present sequence is not shown in the specification but is derived from SEQ ID NO:3 shown in page 17 of the specification.
                                                                                                                                                                                                                                                                                                                Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia
                                                                                                                                                                                                                                                                                                                                                         WPI; 2001-514422/56.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Exendin agonist peptide #72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09-AUG-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic
                                                                                                                                                                                                                                                                                                                                                                                            AAY17535 to AAY17624 represent exendin peptide agonists. Exendins are peptides that are found in the venom of the Gila-monster, a lizard peptides to Arizona and Northern Mexico. The peptide agonists are endogenous to Arizona and soliting for II), hyperglycaemia or used to treat diabetes mellitus (types I or II), hyperglycaemia or hypoglycaemia. They can also be used for in vitro and in vito studies on exendins and their agonists. They regulate gastric motility and slow gastric emptying (resulting in lower post-prandial glucose levels).

                                                                                                                                                                                                                                                                                                                                                                                                                             AAB53029;
                                                                                                                                                                                                                                                                                                                     Heloderma sp.
The present invention relates to extendins and their agonists which have been modified with molecular weight increasing agents such as polyethylene glycol (PEG). These can be used in the treatment of diabetes, obesity, impaired glucose tolerance, postprandial dumping syndrome, postprandial hyperglycaemia, eating disorders, insulin resistance syndrome, dyslipidaemia and to suppress glucagon secretion.
                                                                                                                                                                                                                                                                        09-NOV-2000

This invention describes a novel formulation (I) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pH of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the sensitivity of a subject to insulin to treat diabetes and disorders which benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New formulations comprising an exendin or exendin agonist peptide used for increasing the sensitivity of a subject to insulin to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2000-514584/46.

                      The present sequence represents a modified extendin or extendin agonist. Extendins are found in the salivary glands of the Gila monster and Mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin agonist. These compounds lower plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, suffering from necrolytic crythema or glucagonoma. The method is also useful for treating hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Extendin; Gila monster lizard; Mexican Beaded lizard; agonist; glucagon-like peptide; plasma glucagon; necrolytic erythema; glucagonoma; hyperglucagonemia; diabetes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAE08515 standard; peptide;
                                                                                                                                 The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO200151078-A1.
                                                                                                                                                                                                                                                                                         Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia

constitution of insulin secretion. In contrast, in a normal science and insulin secretion increase. GDM CC pregnancy, both insulin resistance and insulin secretion increase. GDM CC pregnancies are associated with complications in both the mother and the CC pregnancies are associated with complications in both the mother and the CC pregnancies are associated with complications in both the mother and the CC pregnancies. Women with GDM have increased rates of Caesarian delivery, CC pregnancies which as pre-eclampsia, and urinary tract confections. GDM results in an elevated rate of foetal abnormalities such as increased risk of CC as neural tube defects, and is associated with an increased risk of CC neonatal morbidites such as hypoglycaemia, hypocalcaemia, and subsequent CC hypomagnesaemia, polycythaemia, hyperbilirubinaemia, and subsequent CC childhood and adolescent obesity. Exendins are peptides from the salivary CC (exendin-3) which exhibit homology with several members of the CC (exendin-3) which exhibit homology with several members of the CC (exendin-3) which exhibit homology with several members of the CC insulinotropic effects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabetes mellitus (GDM) in a patient. GDM arises during pregnancy, and is due to a combination of increased insulin resistance and a diminished
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 166; Page 113; 133pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Exendin; agonist; Heloderma sp.; Gila monster; venom; lizard; diabetes mellitus type I; diabetes mellitus type II; hyperglycaemia; hypoglycaemia; plasma glucose; gastric emptying; stomach emptying.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hypoglycaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Exendin agonist peptide #61.
                                                                                                                                                                                                                                                                                    regulate gastric motility and slow gastric emptying. The peptides can be used for treating e.g. diabetes or hyperglycaemic or hypoglycaemic conditions. The peptides are exendin agonists which have activity as agents to regulate gastric motility and to slow gastric emptying, as agents to ability to reduce post-prandial glucose levels in evidenced by the ability to reduce post-prandial glucose levels in mammals. They can be used for the treatment of Type I and II diabetes and hyperglycaemic or hypoglycaemic conditions. They can also be used for the treatment of disorders which would be benefited by agents which lower plasma glucose levels and in treatment of disorders which would be benefited with agents useful in delaying and/or slowing gastric emptyrica.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14-NOV-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-MAY-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       regulate gastric motility and slow gastric emptying. The peptides can be used for treating e.g. diabetes or hyperglycaemic or hypoglycaemic conditions. The peptides are exendin agonists which have activity as agents to regulate gastric motility and to slow gastric emptying, as agents to regulate gastric motility and to slow gastric emptying, as evidenced by the ability to reduce post-prandial glucose levels in mammals. They can be used for the treatment of Type I and II diabetes and hyperglycaemic or hypoglycaemic conditions. They can also be used for the treatment of disorders which would be benefited by agents which lower plasma glucose levels and in treatment of disorders which would be benefited with agents useful in delaying and/or slowing gastric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New exendin agonist peptides - can regulate gastric motility and slow gastric emptying, used for treating, e.g. diabetes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAY24809 to AAY24877 represent exendin agonist peptides which can regulate gastric motility and slow gastric emptying. The peptides can lused for treating e.g. diabetes or hyperglycaemic or hypoglycaemic conditions. The peptides are exendin agonists which have activity as agents to regulate gastric motility and to slow gastric emptying, as avidenced by the ability to reduce post-prandial glucose levels in evidenced by the ability to reduce post-prandial glucose levels in hyperglycaemic conditions. They can also be used for hyperglycaemic conditions. They can also be used for treatment of disorders which would be benefited by agents which lower plasma glucose levels and in treatment of disorders which would be benefited with agents useful in delaying and/or slowing gastric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 18; Fig 4; 108pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         emptying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB11275 standard; Peptide; 37
                                         This invention describes a novel formulation (I) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pH of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the sensitivity of a subject to insulin to treat diabetes and disorders which would benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Extendin; agonist; diabetes; obesity; eating disorder; dyslipidaemia; insulin-resistance syndrome; food intake.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Extendin agonist compound #169.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to extendins and their agonists which have been modified with molecular weight increasing agents such as polyethylene glycol (PEG). These can be used in the treatment of diabetes, obesity impaired glucose tolerance, postprandial dumping syndrome, postprandial hyperglycaemia, eating disorders, insulin resistance syndrome, dyslipidaemia and to suppress glucagon secretion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modified exendin or an exendin agonist linked to one or more polyethylene glycol (PEG) polymers, modulate plasma glucose levels, useful for treating disorders such as diabetes and obesity -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 30-APR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a modified extendin or extendin agonist. Extendins are found in the salivary glands of the Gila monster and Mexican Beaded lizard, and have sequence similarity to glucagon-like Mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin agonist. These compounds lower plasma glucagon level The method is useful for lowering plasma glucagon in subjects, preferably humans, suffering from necrolytic erythema or glucagonoma. The method is also useful for treating hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  glucagonoma; hyperglucagonemia; diabetes

                                                                                                                                                                                                                                                                                                                                                                                                                                                               The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09-JAN-2001; 2001WO-US00719.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-JAN-2001; 2001WO-US00719.

Exendins have inotropic and diuretto effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride a significant effect on the reduction of blood serum triglyceride
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 92; Page 92; 161pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-MAR-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB64263;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAB64263 standard; peptide; 37
The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabetes mellitus (GDM) in a patient. GDM arises during pregnancy, and is due to a combination of increased insulin resistance and a diminished ability to increase insulin secretion. In contrast, in a normal ability to insulin resistance and insulin secretion increase. GDM pregnancy, both insulin resistance and insulin secretion increase. GDM pregnancies are associated with complications in both the mother and the foetus. Women with GDM have increased rates of Caesarian delivery, hypertensive disorders such as pre-eclampsia, and urinary tract hypertensive. GDM results in an elevated rate of foetal abnormalities such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Exendin agonist; gestational diabetes mellitus; GDM; insulin resistance; pregnancy complication; neonatal abnormality; blood glucose modulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Exendin agonist, SEQ ID NO:83.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC as neural tube defects, and is associated with an increased risk of CC neonatal morbidites such as hypoglycaemia, hypocalcaemia, componagnesaemia, polycythaemia, hyporalirubinaemia, and subsequent CC childhood and adolescent obesity. Exendins are peptides from the salivary CC childhood and adolescent obesity. Exendins are peptides from the salivary CC secretions of the Gila monater (exendin-4) and the Mexican beaded lizard CC (exendin-3) which exhibit homology with several members of the CC (exendin-3) which exhibit homology with several members of the CC insulinotropic effects. Unlike the compounds used to treat type 2 companies of the contraindicated for GDM, exendins and exendin CC diabetes, which are contraindicated for GDM, exendins and exendin CC agonists do not cross the placenta and thus do not cause severe prolonged CC hypoglycaemia in the newborn. They have a potent and prolonged effect on CC hypoglycaemia in the newborn. They have a potent and prolonged effect on CC weight gain, as they inhibit gastric emptying and reduce appetite. The presents a exendin agonist of the invention which is conventional incompanies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabetes mellitus (GDM) in a patient. GDM arises during pregnancy, and is due to a combination of increased insulin resistance and a diminished ability to increase insulin secretion. In contrast, in a normal pregnancy, both insulin resistance and insulin secretion increase. GDM pregnancies are associated with complications in both the mother and the foetus. Women with GDM have increased rates of Caesarian delivery, hypertensive disorders such as pre-eclampsia, and urinary tract

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 childhood and adolescent obesity. Exendins are peptides from the salivary secretions of the Gila monster (exendin-4) and the Mexican beaded lizard (exendin-3) which exhibit homology with several members of the (exendin-1) which exhibit homology with several members of the glucagon like peptide family, particularly GLP-1, and have similar insulinotropic effects. Unlike the compounds used to treat type 2 insulinotropic effects of the compounds used to treat type 2 insulinotropic effects of the placenta and thus do not cause severe prolonged agonists do not cross the placenta and thus do not cause severe prolonged agonists do not cross the placenta and thus do not cause severe prolonged agonists do not cross the placenta and thus do not cause severe prolonged effect on hypoglycaemia in the newborn. They have a potent and prolonged effect on blood glucose, and, unlike conventional insulin therapy, should not cause weight gain, as they inhibit gastric emptying and reduce appetite. The present sequence represents a exendin agonist of the invention which is based among the seminance of exendin-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        infections. GDM results in an elevated rate of foetal abnormalities such as neural tube defects, and is associated with an increased risk of neonatal morbidites such as hypoglycaemia, hypocalcaemia, hypomagnesaemia, polycythaemia, hyporbilirubinaemia, and subsequent hypomagnesaemia, polycythaemia, hyporbilirubinaemia, and subsequent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            based upon the sequence of exendin-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Exendin agonist; gestational diabetes mellitus; GDM; insulin resistance; pregnancy complication; neonatal abnormality; blood glucose modulator; insulinotropic; anorectic; exendin-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAB64279 standard; peptide; 37 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Heloderma suspectum.
ability to increase insulin secretion. In contrast, in a normal pregnancy, both insulin resistance and insulin secretion increase. GDM pregnancies are associated with complications in both the mother and the foetus. Women with GDM have increased rates of Caesarian delivery,
                                                                                                                                                     The invention relates to the use of an exendin (AAB64181-B64182) or an exendin agonist (AAB64185-B64368) for treating gestational diabete mellitus (GDM) in a patient. GDM arises during pregnancy, and is due to a combination of increased insulin resistance and a diminished to a combination of increased insulin resistance and a diminished

New formulations comprising an exendin or exendin agonist for increasing the sensitivity of a subject to insulin to giaberes peptide used treat

Example 42; Figure 15; 281pp; English.

This invention describes a novel formulation (I) comprising an exendin or exendin agonist peptide, a buffer and an iso-osmolality modifier which has a pH of 3-7. The products of the invention have antidiabetic activity. The exendin or exendin agonist is used to increase the sensitivity of a subject to insulin to treat diabetes and disorders which would benefit from agents which lower plasma glucose levels and disorders which would benefit from agents that delay and/or slow gastric emptying or reducing food intake.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Amino acid sequence of an extendin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-OCT-2000 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic.
Heloderma sp
      AAY94013-43 represent extendin agonists, derived from AAY94012. Extendins are found in the salivary glands of the Gila monster and Extendins are found in the salivary glands of the Gila monster and extending are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin a exendin for lowering plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, useful for treating hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modified-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified-site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Amino acid sequence of an extendin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY94040;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAY94040 standard;
         AAY94013-43 represent extendin agonists, derived from AAY94012. Extendins are found in the salivary glands of the Gila monster and mexican Beaded lizard, and have sequence similarity to glucagon-like mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin an exendin. These compounds lower plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, useful for reacting hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
                                                                                                                                                                                                                                                                                                                                                                         14-JAN-1999; 99US-0116380

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
       AAY94013-43 represent extendin agonists, derived from AAY94012. Extendins are found in the salivary glands of the Gila monster and mexican Beaded lizard, and have sequence similarity to glucagon-like peptides. They are used in the method of the invention. The specification describes a method for lowering plasma glucagon, comprising administering an exendin, an exendin agonist, a modified exendin or a modified exendin agonist. These compounds lower plasma glucagon level. The method is useful for lowering plasma glucagon in subjects, preferably humans, suffering from necrolytic crythema or glucagonoma. The method is also useful for treating hyperglucagonemia and other conditions that would benefit from reduced glucagon levels and/or suppression of glucagon, e.g. type 1 and type 2 diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Extendin; Gila monster lizard; Mexican Beaded lizard; agonist; glucagon-like peptide; plasma glucagon; necrolytic erythema; glucagonoma; hyperglucagonemia; diabetes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                     The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and yslipidaemia, and for modifying postprandial triglyceride levels. Note: The present sequence is an agonist of exendin.

Note: The present sequence is not shown in the specification but is derived from SEQ ID NO:3 shown in page 17 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diuretic; coronary heart disease; dyslipidaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Exendin agonist; antilipemic; cardiant; triglyceride; inotropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Exendin agonist peptide #26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-NOV-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAE08380 standard; peptide; 39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Exendin agonist; antilipemic; cardiant; triglyceride; inotropic; diuretic; coronary heart disease; dyslipidaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAE08380;
                                                                                                                          The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inorropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.

Note: The present sequence is not shown in the specification but is derived from SEQ ID NO:3 shown in page 17 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modified-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modified-site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Exendin agonist peptide #28.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAE08381;
                                                                                                                           The patent discloses a method for modulating plasma or postprandial triglyceride and other lipid levels by administering exendin or an exendin agonist. Exendins have inotropic and diuretic effects. They suppress the secretion of glucagon. Exendin and its agonists have a significant effect on the reduction of blood serum triglyceride concentrations. They are used to treat coronary heart disease and dyslipidaemia, and for modifying postprandial triglyceride levels. The present peptide sequence is an agonist of exendin.

The present peptide sequence is not shown in the specification but is not shown in the specification but is
                                                                                                                                                                                                                                                                            Example 28; Page -; 161pp; English.
                                                                                                                                                                                                                                                                                                    Use of exendin and exendin agonist compounds for modulating triglyceride levels, and treating heart disease and dyslipidemia
                                                                                                                                                                                                                                                                                                                                           WPI; 2001-514422/56.
